

MEB Consulting Manugistics Technology

Manugistics is one of the premier Advanced Supply Chain Planning Applications. Their web based application is being used by organizations across the world, including many Fortune 500 companies, to plan their supply chains and to deliver bottom line savings.

Manugistics has recognized the experience that MEBC brings to its client base, and as a result has named MEBC as one of its alliance partners in the Manugistics Alliance Program. The MEBC team brings with them well in excess of 100 combined Manugistics implementations or upgrades, which enables us to provide a full range of services across the Manugistics suite. Furthermore, the MEBC team played a role in the largest and most complex Manugistics v7.2 install and upgrade, making us well versed in the most up-to-date technology.

MEBC team members have diverse Manugistics experience spanning multiple versions and multiple modules. For example, team members have implemented Manugistics 4.7 version through the latest 7.2 web based version. These implementations have included Demand Planning, Collaboration, Market Manager, Fulfillment, Supply, Transportation, and Strategy, to name a few.

One of the strengths that MEBC brings to its clients is that many of our team members have previously worked for Manugistics at some point during their career. As a result, MEBC has a clear understanding of the Manugistics operations, culture, and client satisfaction goals which enhances our ability to effectively discuss topics that impact our clients. This positive relationship and open communication channel with Manugistics management has allowed us to have access to the most up-to-date information on software releases or enhancements while at the same time sharpening our skill sets.

MEBC understands the true meaning of a Solution Integrator. We work hand-in-hand with Manugistics on behalf of our client to deliver the best solution that will meet or exceed ROI expectations.
